

## NEW RELEASE

Buildwin 4.03 has been in development for over a year and is currently under BETA review at a few sites.

The majority of the changes have already been released as patches, and we have improved the behind the scenes processing of data locks—improving the processing at multi user sites.

Other nice little features include auto download of latest patches and the ability to send us your log files so we can problem solve any unexpected features.

Whilst this upgrade is not as fundamentally big a change as the last one, it does need to be implemented prior to end of financial year to prepare for the 2009—2010 payroll.

To that end it will be available by the end of May for public release.

Current Version 4.02

## BUILDWIN TAX TABLES

The new tax tables for the next financial year will be available for download shortly. The ATO has only released 1 of 4 to date.

Please ensure these are installed immediately after the final payroll calculation (s) of this financial year.

If you have custom tables for employees with specific tax arrangements you will need to recreate them in the new tables.

## Manufacturing Cost Control and Stock Module

Includes:

- **Cash Sales**
- **Stock Take**
- **Stock Costing**

Contact us for a demonstration & pricing

**Now available**

## USER MEETING

Given the time of the year and the nature of the industry at present. It is worth asking the question if we should plan a user meeting for the release and payment summary routines.

If your organisation is interested in attending a 2 hour meeting in early to mid June then please indicate a day / time preference and email to [glen@buildwin.com.au](mailto:glen@buildwin.com.au)
